

Hurricane Preparedness Tips – Outdoor Storage/ Patios

OUTDOOR STORAGE AREAS

- Should be installed to code.
- If it is not installed to code, and time allows, remove shed.
- Remember all non-secured items will be airborne projectiles during high winds.

PATIO SCREENS

Patio screens will have a tendency to pop out when winds exceed 75 miles per hour.

If possible, remove the screens by pulling out the spline which secures the screen to the structure in order to let the wind in without damaging either the screen or the structure.

After the storm, the screens can be reassembled by replacing the spline.
